

When conducting your annual IG inventory, please consider the following:

- In September of this year (as a result of the August competitive source working group - CSWG - conference), I&L (Code LR) reported that all USMC legal support processes (MJ, LA, Tax, Oplaw, Civlaw, etc.) are Core, Critical Enabling. This is a higher threshold than "must be government (inherently governmental)."
- The Core, Critical Enabling designation is a very good thing for our community as it distances our billets from outsourcing.
- How this might interface with the IG inventory:
 - Reporting a billet as NOT IG creates a potential inconsistency with a legal process that has been identified as Core, Critical Enabling.
 - Please contact JAR if you have questions about specific billets within your inventory that might conflict with the CCE designation.

Obviously, if you not tasked with the annual IG inventory requirement, then consider this info more than you need this close to Thanksgiving!
